SUMMARY OF THE DEGREE PROGRAMME

Level of education:

Master's degree

Degree programme profile:

Sanitary examination and clinical and laboratory diagnostics in veterinary medicine

Title and code of the broad field of education:

36.00.00 Veterinary and animal science

Degree programme:

36.04.01 Veterinary and sanitary examination

Workload (ECTS): *120 credits*

Duration and mode of study according to the degree programme – *full-time study (2 years)*

Qualification (degree) – *Master*

Degree programme description – *formation of graduates' competencies necessary to carry out professional activities in accordance with the Federal State Educational Standard; formation of the ability to acquire new knowledge, psychological readiness to change the type and nature of their professional activities and providing graduates with the opportunity to continue their education; ensuring a variety of educational opportunities for students; ensuring the training of graduates who are able to show flexibility and activity in changing labor market conditions for various fields of activity.*

Type(s) of professional activity(s) for which graduates are prepared – *production and technological*

Strategic partners of the programme (employers):

- Federal State Budgetary Institution 'Rostov Reference Center of Rosselkhozadzor',
- LLC 'VITAVET',
- IE Ermakova I.A. (Veterinary clinics 'Center').

1 CHARACTERISTICS OF THE MAIN PROFESSIONAL EDUCATIONAL PROGRAMME OF HIGHER EDUCATION

The main professional educational programme of higher education, implemented in the direction of training 36.04.01 Veterinary and sanitary inspection, the master's programme Sanitary inspection, clinical and laboratory diagnostics in veterinary medicine is a system of documents, developed and approved by the DSTU taking into account the needs of the regional labor market on the basis of the federal state educational standard of higher education in the field of training 36.04.01 Veterinary and sanitary examination (master's degree level) approved by Order of the Ministry of Education and Science of the Russian Federation dated 28.09.2017 No. 982.

The degree programme regulates the goals, planned results, content, conditions and technologies for the implementation of the educational process, assessment of the quality of graduate training in this field of training and includes: curriculum, calendar training schedule, work programmes of academic disciplines (modules), practices and state final certification and other materials that ensure the quality of training of students, and also, the necessary methodological materials that ensure the implementation of the appropriate educational technology.

1.1 Aims and objectives of degree programme

The main objective of the programme is to train qualified personnel in the field of veterinary-sanitary inspection under the programme 'Sanitary inspection clinical and laboratory diagnostics in veterinary medicine' through the formation of students universal, general professional and professional competencies in accordance with the requirements of the Federal State Educational Standard in the field of training 36.04.01 Veterinary-sanitary inspection, as well as the development of personal qualities (purposefulness, organization, diligence, responsibility, communication skills, tolerance, general culture), allowing to implement the formed competencies in professional activities.

The aim of degree is to provide documentation and methodological support for the implementation of the Federal State Educational Standard of Higher Education and, on this basis, to develop students' personal qualities, as well as the formation of universal, professional and vocational competencies that contribute to the successful activity in the profile of training.

In the field of education, the aim of degree programme is to form social and personal qualities of students: purposefulness, organization, diligence, responsibility, citizenship, communicativeness, tolerance, increasing their general culture.

In the field of studies, the objective of degree programme is:

- to develop graduates' competencies necessary for professional activity in accordance with Federal State Educational Standard of Higher Education;
- to develop the ability to acquire new knowledge, the psychological readiness to change the type and nature of one's professional activity and to ensure that the graduate is able to continue his or her education;

- to ensure a diversity of educational opportunities for learners;
- to prepare graduates who are able to be flexible and proactive in the changing labour market conditions for the areas of work within the competence of the Master of Veterinary-sanitary inspection.

The programme is implemented independently without the use of a network form.

Educational activities on degree programme are carried out in English.

1.2 Qualifications awarded to graduate

Upon successful completion of degree programme, a graduate is awarded with the qualification ‘Master’ in the field of training 36.04.01 Veterinary-sanitary inspection.¹

1.3 Workload of degree programme

The workload of the degree programme is 120 credits for the entire period of study in accordance with the Federal State Educational Standard of Higher Education and includes all types of classroom and independent work, practice and time allocated for quality assurance of degree programme.

1.4 Duration of degree programme

In accordance with the Federal State Educational Standard of Higher Education, the period of study in the full-time mode of study is 2 years.

2 CHARACTERISTICS OF GRADUATES PROFESSIONAL ACTIVITY

2.1 Professional field(s) and area(s) of graduate professional activity

The field of professional activity in the direction of 36.04.01 Veterinary and sanitary examination of graduates who have mastered the master’s programme – 13 Agriculture, professional standard ‘Employee in the field of veterinary medicine’.

The field of professional activity of the Master’s degree programme graduates includes:

- organization and control during transportation of products of animal and vegetable origin;
- veterinary-sanitary inspections of products and raw materials of animal and vegetable origin;
- control of compliance with veterinary-sanitary rules in the implementation of export-import operations and transportation of animals;

¹ The qualification awarded to a graduate is determined in accordance with the Order of the Ministry of Education and Science of Russia N 1061 of 12 September 2013 ‘On approval of the lists of specialities and areas of higher education training’.

- planning, organizing and conducting laboratory veterinary-sanitary control at slaughterhouses and processing industry workshops, specialized trade enterprises, markets.

2.2 Type(s) of tasks and objectives of graduate's professional activity

- production and technological.

A graduate who has mastered the Master's degree programme, in accordance with the type(s) of professional activity that the master's degree programme is focused on, is ready to solve the following professional tasks:

- identification of necessary improvements and development of new, more effective methods and means of veterinary-sanitary inspection to determine the biological safety of raw materials, animal and plant products;
- improvement and development of new means and methods of veterinary-sanitary treatment of agro-industrial enterprises;
- development of veterinary-sanitary measures for the prevention of anthroozoonosis at meat processing enterprises.

2.3 Objects of graduate's professional activity

The objects of professional activity of graduates who have mastered the Master's degree programme are:

- raw materials and products of animal and vegetable origin subject to veterinary-sanitary inspection to determine their suitability for use for food and feed purposes;
- activities to protect the population from diseases common to humans and animals, to protect the territory of the Russian Federation from the introduction of infectious diseases from other states, as well as to protect the environment from pollution;
- veterinary monitoring, the state of the epizootological situation in the regions of the Russian Federation and the biological safety of raw materials, animal and plant products;
- departmental regulatory documentation;
- processing industry enterprises, refrigerators, sanitary slaughterhouses, veterinary-sanitary recycling plant, laboratories of state veterinary-sanitary inspection at markets, exhibitions, fairs and other facilities and structures;
- materials, processes, services and research methods subject to control for compliance with veterinary-sanitary requirements.

2.4 Description of labour functions in accordance with the professional standard (map of professional activity)

In accordance with the professional standard 13.012 ‘Employee in the field of veterinary medicine’, (Order of the Ministry of Labor of the Russian Federation No. 712n dated 12.10.2021), the graduate must master the following labor functions:

1. Providing veterinary care to animals of all kinds:
 - conducting a clinical examination of animals in order to establish a diagnosis;
 - carrying out measures for the treatment of sick animals.

2.5 Key partners for degree programme

The key partners (representatives of employers’ associations) involved in the formation and implementation of the OPOP in are:

- Federal State Budgetary Institution ‘Rostov Reference Center of Rosselkhoz nadzor’
- VITAVET LLC
- IE Ermakova I.A. (Veterinary clinics ‘Center’)

The educational programme does not contain information constituting a state secret.

3 EXPECTED RESULTS OF MASTERING THE MAIN PROFESSIONAL EDUCATIONAL PROGRAMME OF HIGHER EDUCATION

The results of mastering the degree programme are determined by the competencies acquired by the graduate, i.e. their ability to apply knowledge, skills and personal qualities in accordance with the tasks of professional activity. As a result of mastering this degree programme, the graduate should have the following competencies:

universal competencies (UC):

UC-1. To be able to carry out a critical analysis of problem situations based on a systematic approach, to develop a strategy of actions;

UC-2. To be able to manage the project at all stages of its life cycle;

UC-3. To be able to organize and manage the work of the team, developing a team strategy to achieve the set goal;

UC-4. To be able to apply modern communication technologies, including in a foreign language(s), for academic and professional interaction;

UC-5. To be able to analyze and take into account the diversity of cultures in the process of intercultural interaction;

UC-6. To be able to determine and implement the priorities of his own activities and ways to improve it on the basis of self-assessment;

general professional competencies (GPC):

able to use data on biological status and normative general clinical indicators to ensure (GPC-1);

able to analyze the impact of natural, socio-economic, genetic and economic factors on the animal body (GPC-2);

able to carry out and improve professional activities in accordance with regulatory legal acts in the field of agro-industrial complex (GPC-3);

is able to use in professional activity methods of solving problems using modern equipment in the development of new technologies and use modern professional methodology for conducting experimental studies and interpreting their results (GPC-4);

able to draw up special documentation, analyze the results of professional activity and submit accounting documents using specialized databases (GPC-5);

Able to analyze, identify the hazard assessment of the risk of occurrence and spread of diseases of various etiologies (GPC-6)

professional competencies (PC):

1. Production and technological type of tasks

ability to conduct veterinary-sanitary inspection of raw materials and products of animal origin and plant products of non-industrial manufacture for food purposes, as well as feed and feed additives of plant origin (PC-1);

readiness to carry out laboratory and industrial veterinary-sanitary quality control of raw materials and safety of animal products, non-industrial plant products for food purposes, as well as feed and feed additives of plant origin (PC-2).

In accordance with the requirements, indicators of achievement of universal, general professional and professional competencies have been established, which are formed in the document ‘Indicators of achievement of competencies’.

4 REQUIREMENTS FOR THE STRUCTURE OF THE EDUCATIONAL PROGRAMME

4.1 Structure of the degree programme

The structure of the educational programme includes the following units:

Unit 1 ‘Disciplines (modules)’.

Unit 2 ‘Practice’.

Unit 3 ‘State final assessment’.

Table 1 - Structure and scope of the programme²

	Programme structure	The requirement of the Federal State Educational Standard in credits
Unit 1	Disciplines (modules)	at least 77
Unit 2	Practice	at least 26
Unit 3	State final assessment	at least 6
Scope of the programme		120

4.2 Unit 2 ‘Practice’

² In accordance with the Federal State Educational Standard

Unit 2 'Practice' includes study and industrial placements.

Types of study placement:

Specific types of study placement are specified in the curricula.

Types of industrial placement:

Specific types of industrial placement are specified in the curricula.

When conducting an internship by directly performing certain types of work by students related to future professional activity, this type of practice is carried out in the form of practical training.

4.3 Unit 3 'State final assessment'

Unit 3 'State final assessment' includes:

- completion and protection of the final qualifying work.

5 DOCUMENTS REGULATING THE CONTENT AND ORGANIZATION OF THE EDUCATIONAL PROCESS IN THE IMPLEMENTATION OF THE EDUCATIONAL PROGRAMME

5.1 Curriculum, timetable, syllabuses of disciplines (modules), practices, state final assessment programme and methodological materials

The following components of the degree programme are placed in the electronic information and educational environment and on the official website of the DSTU in the appropriate level of education subsection 'Education':

- curricula;
- academic schedules;
- annotations to working programmes of disciplines (modules), practices;
- working programmes of disciplines (modules), practices;
- state final assessment programmes;
- methodological materials (including in the DSTU Electronic Library System).

5.2 Assessment materials for disciplines (modules), placements, research work, state final assessment

Evaluation materials on the degree programme allow to assess the level of competence formation are formed in accordance with the Regulations on evaluation materials (evaluation tools).

Evaluation materials may contain: control questions and standard tasks for practical and laboratory classes, for written papers, control papers, colloquiums, preparation of reports, abstracts, speeches, preparation of reports, group and individual projects, tests and exams; tests and computer testing programmes; approximate topics

of term papers, abstracts, etc., as well as other forms of control that allow assessing the degree of formation of students' competencies.

For each result of training in a discipline or practice, indicators and criteria for assessing the formation of competencies at various stages of their formation, scales and evaluation procedures are defined.

To evaluate the results of training in each discipline and practice at the university, a point rating system is used.

Evaluation materials for the state final assessment include a list of competencies that students should master as a result of mastering the educational programme: a description of indicators and criteria for assessing competencies, as well as assessment scales; standard control tasks or other materials necessary to evaluate the results of the development of the educational programme; methodological materials defining the procedures for evaluating the results of the development of the educational programme.

Evaluation materials for each discipline (module), practice, state final assessment are stored at the department implementing the degree programme.

5.3 Methodological materials for disciplines (modules), placements, research work and state final attestation

Methodological materials are a set of methodological materials on the discipline (module, practice, state final assessment), formed in accordance with the structure and content of the discipline (module, practice), the educational technologies used and the forms of organization of the educational process.

Organizational and methodological materials (guidelines, recommendations), allow the student to optimally plan and organize the process of mastering the educational material.

Educational and methodological materials are aimed at students' assimilation of the content of the discipline (module, practice, state final assessment); and are also aimed at checking and appropriately assessing the formation of students' competencies at various stages of mastering the educational material.

Textbooks, manuals, teaching aids, workbooks, and task books are used as educational publications.

6 RESOURCE SUPPORT OF THE EDUCATIONAL PROGRAMME

6.1 Educational, methodological and informational support of the educational process in the implementation of the educational programme

The educational programme is provided with educational and methodological documentation and materials in all disciplines (modules), practices of the state final certification.

The implementation of the educational programme is ensured by the access of each student to databases and library collections formed according to the full list of

disciplines (modules) of the educational programme. During independent training, students are provided with access to the Internet.

Each student is provided with individual unrestricted access to one or more electronic library systems (electronic libraries) and to the electronic information and educational environment of the university during the entire period of study. The electronic library system (electronic library) and the electronic information and educational environment provide the possibility of student access from any point where there is access to the information and telecommunications network 'Internet', both on the territory of the organization and outside it.

The electronic information and educational environment of the university provides:

- access to the electronic library system;
- access to electronic educational resources and/or professional databases (collections of information resources on topics) in accordance with the content of the educational programme being implemented;
- access to an electronic learning system that ensures the interaction of teaching staff with students (personal accounts of students and teachers);
- access to an electronic schedule (an electronic schedule means a service through which each student can find out their current schedule of classes and sessions);
- access to students' electronic portfolios;
- access to curricula, work programmes of disciplines (modules), practice programmes, electronic educational publications and electronic educational resources specified in the work programmes of disciplines (modules), practice programmes according to the educational programme.

The functioning of the electronic information and educational environment is ensured by appropriate means of information and communication technologies and the qualifications of employees who use and support it.

The Scientific and Technical Library of DSTU is equipped with the necessary telecommunication equipment, communication means, electronic equipment, has free access to the Internet, uses Wi-Fi technologies. For independent work of students, there are 5 reading rooms with 720 seats, including 42 automated workstations with access to the Internet and the electronic educational environment of the university.

The electronic library of the University, which includes access to resources, virtual services and information materials, is formed on a single portal of the Scientific and Technical Library <https://ntb.donstu.ru/>, which can be accessed from the electronic information and educational environment of the university. A 'Single Search Window' system has been formed on the library's website, which combines the search for its own and external resources of the Scientific and Technical Library.

Each student is provided with individual unrestricted access (remote access), including in the case of e-learning, distance learning technologies, to the electronic library and electronic information and educational environment of the university, electronic library systems, modern professional databases and information reference systems, the composition of which is defined in the work programmes of disciplines and is updated annually, to the electronic information resources of the NTB

(<https://ntb.donstu.ru/content/elektronno-informacionnyye-resursy>) from anywhere on the Internet 24/7, containing:

- ELS 'University Library online' (<http://biblioclub.ru>);
- ELS 'IPRbooks' (<http://www.iprbookshop.ru>);
- ELS 'Lan' (<https://e.lanbook.com>);
- ELS 'Znanium' (<http://znanium.com>);
- ELS 'DSTU' (<https://ntb.donstu.ru/ebsdstu>);
- electronic library of dissertations of the Russian State Library (<https://dvs.rsl.ru>);
- information and reference system 'Techexpert: norms, rules, standards and legislation of Russia';
- information and educational system 'Rosmetod' (<http://rosmetod.ru>) and others.

The library fund is equipped with printed publications at the rate of at least 0.25 copies of each of the publications specified in the work programmes of disciplines (modules), practice programmes for one student from among persons simultaneously mastering the relevant discipline (module), undergoing appropriate practice (FGOS 3++).

Students from among persons with disabilities are provided with electronic educational resources in forms adapted to the limitations of their health.

The fund of periodicals contains, among other things, the following publications on educational programme:

- electronic scientific journals on the NEB eLibrary platform (<https://elibrary.ru>);
- electronic scientific journals in the collection of ELS 'Lan' (<https://e.lanbook.com/journals>);
- electronic scientific journals in the collection of ELS 'IPRbooks' (<http://www.iprbookshop.ru/6951.html>);
- electronic scientific journals in the collection of the ELS 'University Library Online' (<http://biblioclub.ru>);
- electronic scientific journals in the collection of ELS 'Znanium' (<http://znanium.com>);
- specialized electronic periodicals in ISS 'Techexpert';
- archive of scientific journals of the Non-profit Partnership 'National Electronic Information Consortium' (NP NEICON) (<http://archive.neicon.ru>);
- archive of periodicals on the ScienceDirect platform of Elsevier publishing house (<https://www.sciencedirect.com>).

6.2 Personnel support for the implementation of the educational programme³

The qualification of DSTU teaching staff meets the qualification requirements specified in the qualification reference books and (or) professional standards (if any).

³ The section is filled in in accordance with the FSES

At least 70 percent of the number of teaching staff of the university participating in the implementation of the educational programme, and persons involved in the implementation of the educational programme on other terms (based on the number of substituted rates reduced to integer values), must conduct scientific, educational, methodological and (or) practical work corresponding to the profile of the discipline (module) taught.

At least 5 percent of the number of DSTU teaching staff participating in the implementation of the educational programme, and persons involved by the university in the implementation of the master's degree programme on other terms (based on the number of replacement rates reduced to integer values), must be managers and (or) employees of other organizations engaged in work in the professional field corresponding to the professional the activity for which graduates are preparing (have at least 3 years of work experience in this professional field).

At least 60 percent of the number of DSTU teaching staff and persons involved in educational activities on other terms (based on the number of substituted rates reduced to integer values) must have an academic degree (including an academic degree obtained in a foreign country and recognized in the Russian Federation), and (or) an academic title (including an academic title obtained in a foreign country and recognized in the Russian Federation).

The general management of the scientific content of the master's degree programme is carried out by a scientific and pedagogical employee of the organization who has an academic degree (including an academic degree obtained in a foreign country and recognized in the Russian Federation), who carries out independent research (creative) projects (participating in the implementation of such projects) in the field of training, who has annual publications on the results of the specified research (creative) activities in leading domestic and (or) foreign peer-reviewed scientific journals and publications, and also carrying out annual approbation of the results of this research (creative) activity at national and international conferences.

6.3 Material and technical support of the educational programme

The University has a sufficient material and technical base that ensures the conduct of all types of disciplinary and interdisciplinary training, laboratory, practical and research work of students provided for in the curriculum, and corresponding to the current sanitary and fire safety rules and regulations.

The premises for independent work of students are equipped with computer equipment with the ability to connect to the Internet and provide access to the electronic information and educational environment of the organization.

The University is provided with the necessary set of licensed and freely distributed software, including domestic production (the composition is determined in the working programmes of disciplines (modules), and is subject to updating (if necessary).

Students are provided with access (remote access), including in the case of e-learning, distance learning technologies, to modern professional databases and

information reference systems, the composition of which is determined in the work programmes of disciplines (modules) and is subject to updating (if necessary).

7 CHARACTERISTICS OF THE SOCIO-CULTURAL ENVIRONMENT OF THE UNIVERSITY, ENSURING THE DEVELOPMENT OF STUDENTS UNIVERSAL COMPETENCIES STUDENTS

The socio-cultural environment of the university is a set of conceptual, substantive, personnel, organizational and methodological resources aimed at creating a humanitarian environment in an educational institution that ensures the development of universal competencies of students.

The university carries out systematic work on the implementation of youth policy and educational work, the organizational structure of the educational process is effective – the Department for Educational Work and Youth Policy, the Department for the Development of Student Sports, as well as the Student Council, student associations and the Commissioner for Students' Rights.

Educational activities and extracurricular general cultural work at the university are organized in a number of areas:

1) 'Civil-patriotic education'. Rallies and festive mass events dedicated to public holidays, memorable dates of the history of Russia are organized and held: Defender of the Fatherland Day, Victory Day, Cosmonautics Day, etc. Open lectures, military sports games are held, film screenings are organized.

2) 'Creative education'. The creative abilities of students are being realized in creative collectives that carry out their activities at DSTU: the Bravo Studio theater; the DSTU creative center, within which such creative collectives as the Lis Theater, the Impulses pop collective, the Zodchie Theater of Modern Choreography, the Imedi exemplary folk choreographic ensemble work, dance theater 'Without limit', dance group 'D'angels', studio of choreographic miniatures 'Arabesque', vocal studio 'New Generation', Don KVN center, etc.

3) 'Cultural and moral education'. A significant contribution to the educational work is made by the cultural center and the Scientific and Technical Library of the University.

The Cultural Center forms a cultural and aesthetic environment at the university and instills the basics of corporate culture in students. This is facilitated by the fact that the main solemn events and holidays at the university are accompanied by the removal of the university's flag, listening and singing the DSTU anthem, which was created on the initiative of the cultural center.

On the basis of the scientific and technical library, book exhibitions, review lectures, literary and musical compositions that contribute to the cultural development of the student's personality and the prevention of negative social phenomena are regularly held.

4) 'Social interaction'. Students of DSTU participate in volunteer groups and annual actions: 'Backpack of happiness'; 'Days of donor coming of age'; 'Santa Claus Bag', etc.

5) 'Psychological education'. Active work is being carried out and activities are being carried out in the following areas: psychological education; comprehensive work on the socio-psychological adaptation of first-year students; psychological diagnostics; group training work; psychological counseling and correction.

6) 'Physical education'. The festival of student sports 'Burevestnik', the sports contest of freshmen, the rally 'Winter Cup of DSTU', etc. are held.

The following student public organizations are successfully functioning at the university:

1. Student Council of DSTU, including student Councils of dormitories;
2. Primary trade union organization of students of DSTU;
3. Volunteer centers: volunteer center for social work 'Burning hearts', volunteer center 'Zvezda', student psychological unit 'Assistance';
4. The headquarters of the student detachments of DSTU;
5. Commissioner for the rights of students of DSTU.

6. 'Student self-government'. DSTU attaches particular importance to the development of student self-government, in which the Student Council of DSTU plays an important role. There are representatives of the Student Council at every faculty, in every dormitory and in every academic group.

An important role in the educational process is played by traditional mass events held by the university for the formation and development of corporate culture: Freshman Day, Art Week, Tatiana's Day, 'Miss DSTU', etc.

An important role in the general cultural development of students of the university is assigned to the Primary trade union Organization of students of DSTU, which unites students of the university to implement the tasks assigned to it. Such tasks include: protection of professional, labor, socio-economic rights and interests of trade union members; providing trade union members with legal and social protection; negotiating with the university administration, concluding a collective agreement and its implementation, providing material and consulting assistance to trade union members, exercising public control over the operation of the catering complex, etc.

The activities of the University History Center are of great importance in educational work. Here you can get acquainted with the history and traditions of the university, learn a lot about outstanding people directly involved in many events: veterans of the Great Patriotic War, the leaders of production, graduates of the university.

The university has a Psychological support Center, a youth center for the prevention of negative phenomena 'Quality of Life'.

For recreation and sports, students and university employees are given the opportunity to visit sports facilities, including: the sports and recreation complex of DSTU with a swimming pool, an athletics arena, the sports and recreation complex 'Rainbow', the sports and recreation complex 'Builder', the recreation center of DSTU on the left bank of the Don, the sanatorium-dispensary 'Zarya', equestrian club of DSTU 'Horse running', aeronautics club 'Don Sky', yacht club 'Quiet Don' and other elements of sports infrastructure (large university gym, mini-football field, gyms in dormitories, billiard club, football field and obstacle course).

The university has created a socio-cultural environment necessary for the formation of a civil, legal and professional position of participation, the readiness of all members of the team to communicate and cooperate, the ability to perceive social, personal and cultural differences with tolerance.

Information about extracurricular work is posted on the university's website. Social networks are actively used in this direction. Announcements about the events and their social significance are placed on the information stands of the faculty. Curators of groups and deputy deans introduce students to the schedule of upcoming events and organize their participation.

8 FEATURES OF THE ORGANIZATION OF THE EDUCATIONAL PROCESS FOR PEOPLE WITH DISABILITIES

DSTU has created special conditions for obtaining higher education according to educational programmes for students with disabilities.

Special conditions for obtaining higher education according to educational programmes by students with disabilities are understood as learning conditions, including the use of special educational programmes and methods of teaching and upbringing, special textbooks, teaching aids and didactic materials, special technical means of teaching for collective and individual use, the provision of tutor services (from among the teaching staff), sign language interpreter, teacher-a psychologist, a social pedagogue, providing students with the necessary technical assistance; conducting group and individual remedial classes, providing access to DSTU buildings and other conditions, without which it is impossible or difficult for students with disabilities to master educational programmes.

Information about special conditions created for students with disabilities is available on the university's website (<https://clck.ru/FJWKV>)

The education of students with disabilities can be organized both jointly with other students, and in separate groups or according to an individual curriculum (based on the student's application).

When studying in separate groups of students with disabilities, the number of groups is no more than 15 people.

The term of obtaining higher education according to an individual plan for persons with disabilities, if necessary, can be extended, but not more than 1 year (bachelor's degree, specialty) or 6 months (master's degree).

Material and technical support of the educational process:

1. For persons with hearing disabilities:
 - availability of sound-amplifying equipment, multimedia and other technical means of receiving and transmitting information in accessible forms;
 - the classroom where students with hearing impairment study will be equipped with computer equipment, audio equipment (acoustic amplifier and speakers), video equipment (multimedia projector, TV), electronic whiteboard, multimedia system.
2. For persons with visual disabilities:

- availability of electronic magnifiers, video magnifiers, non-visual access to information programmes, speech synthesis programmes and other technical means of receiving and transmitting educational information in forms accessible to this category of students;

- in classrooms, it is necessary to provide for the possibility of viewing remote objects (text on the blackboard, slide on the screen) using video magnifiers for remote viewing.

3. For persons with disabilities who have disorders of the musculoskeletal system:

- availability of computer equipment with special software adapted for students with disabilities, alternative information input devices and other technical means of receiving and transmitting educational information in forms accessible to students;

- using special features of the Windows operating system, such as an on-screen keyboard with which you can enter text, configuring Windows actions when typing using the keyboard or mouse.

Educational and methodological support of the educational process for students with disabilities provides:

1. Inclusion of specialized adaptation disciplines in the curriculum for the purpose of additional individualized correction of violations of educational and communicative skills, professional and social adaptation. The set of these disciplines is determined based on the specific situation and individual needs of students with disabilities based on the student's application.

2. In the educational process, socially active and reflective teaching methods, technologies of socio-cultural rehabilitation should be widely used in order to assist in establishing full-fledged interpersonal relationships with other students, creating a comfortable psychological climate in the student group.

3. Providing students with disabilities with special printed and electronic educational resources in forms adapted to the limitations of their health (students with hearing impairment receive information visually, visually impaired – audibly (using speech synthesizer programmes).

4. For practical training for persons with disabilities, if necessary, special jobs are created in accordance with the nature of violations and taking into account the professional type of activity.

5. For the current monitoring of academic performance, intermediate and final attestation, evaluation materials are created adapted for persons with disabilities and allowing to assess the level of formation of all competencies declared in the educational programme.

The form of the current and intermediate certification for students with disabilities is determined by the teacher in accordance with the Regulations on the current control and intermediate certification of students. If necessary, a student with disabilities, taking into account his individual psychophysical characteristics, is given the opportunity to pass an interim certification orally, in writing on paper, in writing on a computer, in the form of testing, etc., or is given additional time to prepare an answer.

9 REQUIREMENTS FOR THE APPLIED MECHANISMS FOR ASSESSING THE QUALITY OF EDUCATIONAL ACTIVITIES AND TRAINING OF STUDENTS IN THE EDUCATIONAL PROGRAMME

The quality of educational activities and training of students within the educational programme is determined within the framework of an internal evaluation system, as well as an external evaluation system, in which the university participates on a voluntary basis.

In order to improve the educational programme of the DSTU, when conducting a regular internal assessment of the quality of educational activities and training of students within the educational programme of higher education attracts employers and (or) their associations, other legal entities and (or) individuals, including teaching staff of the university.

Within the framework of the internal system for assessing the quality of educational activities in the educational programme, students are given the opportunity to assess the conditions, content, organization and quality of the educational process as a whole and individual disciplines (modules) and practices.

An external assessment of the quality of educational activities under the educational programme within the framework of the state accreditation procedure is carried out in order to confirm the compliance of educational activities under the educational programme with the requirements of the Federal State Educational Standard, taking into account the corresponding exemplary educational programme.

External assessment of the quality of educational activities and training of students in the educational programme can be carried out within the framework of professional and public accreditation.
